

## **Evaluator Scope — Final v0.01**

The evaluator is limited to assessing whether a given request satisfies a defined set of stated constraints based on declared attributes.

Its scope is intentionally narrow. The evaluator performs no validation of inputs, no persistence of data, and no external lookups. It does not determine authority, compliance, entitlement, or access, nor does it trigger actions or outcomes beyond returning an evaluation result.

The evaluator's role is confined to expressing logical eligibility at a specific point in time, based solely on the information provided.
