

# Evaluator Outputs — Final v0.01

The evaluator returns a structured result expressing the outcome of the assessment.

The output consists of:

1. **Eligibility Result**

An explicit expression of whether the declared attributes satisfy the stated constraints. The result is limited to one of the following states:

- **Eligible**
- **Not Eligible**
- **Conditionally Eligible**

2. **Explanatory Context**

A brief, non-normative description of how the evaluation was reached. This context is informational only and does not imply authority, enforcement, entitlement, or required action.

The output represents a point-in-time logical assessment and carries no persistence, control, or decision-making power beyond the evaluation itself.
