Evaluator Usage Guide — Final v0.01

This guide describes how the evaluator may be used as a reference artifact to illustrate the logical flow of eligibility evaluation.

To use the evaluator, a request context, a set of declared attributes, and a set of stated constraints are provided as inputs. These inputs are evaluated together to determine whether the declared attributes satisfy the stated constraints at a specific point in time.

The evaluator returns an eligibility result and a brief explanatory context. The output is informational only and does not imply authority, enforcement, entitlement, or required action.

The evaluator is intended for illustrative and analytical use only and may be re-implemented or adapted without reliance on any specific platform, institution, or governance model.
